## Senior Front End Engineer

I am a dedicated senior front end engineer with 10 years of experience working with React. My passion lies in the client side of software products, where you can make a visible impact and directly influence the UX and UI. I take pride in my work, am organized, and driven by a curiosity to continually learn and improve. As a self-starter, I am committed to delivering high-quality code and taking ownership of my projects. I collaborate effectively with designers and backend engineers to transform complex ideas into functional applications. Additionally, I possess knowledge and experience in backend development and database management. I have been working remotely since 2018 and am adept at maintaining productivity and collaboration in a remote environment.

---
